- **1** Do not operate under the effect of alcohol, medicines or drugs wich could alter your Physical conditions.
- **2** Keep hair and other parts of the body far from rotating parts such as belts and gears.
- **3** Keep the signboards signalling danger, as well as the ones containing safety data, clean and in order.

WARRANTY

The Manufacturing company guarantees the machine for six months from the delivery date.

The warranty covers only the replacement of defective parts. Electric parts and motors are excluded from the warranty. The service request is a customer's cost

PROPER and INCORRECT USE

To operate with this machine, you must have the normal preparation of a baker
The machine has to be used by only one competent operator and has not to be settled in places accessible
to everybody. It is forbidden to employ the machine for any other use differing from bakery or pastry
products.

♣ NOISE LEVEL

The average noise level near the working place is less than 70 decibel.

RESIDUAL RISKS

The machine has been manufactured in conformity with the safety regulations of CEI rules. Using the machine in situations and ways differing from those foreseen by the manufacturing may cause unpredictable risks. It is forbidden to alter mechanic or electric devices and parts, to change the internal and external structure of the machine, and to loosen or unscrew bolts and screws

When the machine is working, all the covers, crankcase, shelters and safety protections have to be duly fixed to the structures and have to be in working order

TECHNICAL DATA

	F500	F600
Cylinder lenght	500 mm	600 mm
Cylinders diameter	60 mm	60 mm
Cylinders opening	38 mm	38 mm
Motor power	Kw 0,75	kw 0,75
Weight	145 kg	160 kg
Frame	epoxy powder coated steel	epoxy powder coated steel

LONFORMITY TO THE REGULATIONS

The electric system is in conformity with the EN 60204-1 rules. The materials which are brought into contact with the dough are in conformity the FDA rules. The machine has been realized in conformity with the Directive Machines 2006/42/EC; 2004/108/EC; 2006/95/EEC; 93/43/EEC (Limited than as described in clapter V, paragraph A annex); Regulation EC 1935/2004.Technical standards applied: EN292-EN60204.1 – EN294- EN 419

SAFETY DEVICES

The safety device is formed by a belt of entry and by a protective plexiglass or grilled that raising stops the machine

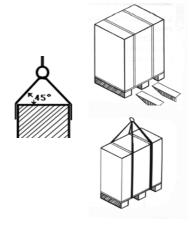

One emergency-stop red push-button with a yellow ring is within easy reach from the working position.

LIFTING AND MOVING

The machine must be lifted only by authorized operators

For the transport the machine is delivered packed in a wood crate or in a cardboard filled with a pallet and it can be lifted by means of a forklift by inserting the forks in the spaces placed under the crate or with a crane by inserting ropes or bands under the crate. In this case the tension max. angle of the ropes, which is 45°, has to be respected. Once unpacked, the machine can be lifted with a crane

ACCEPTANCE

The packed machine can be stored under cover for six months. Unpack the machine and notify the forwarder for eventual damages. The eventual damages have to be notified to the Manufacturing firm immediately.

ELECTRIC CONNECTIONS

The electric connections have to be made by authorized operators

The electric line voltage must be the same voltage indicated on the data plate placed on the back of the machine. The electric feeding is realised through a capacity selector proper to the power request of the machine with a four contact three phases plug (three phases + earth)

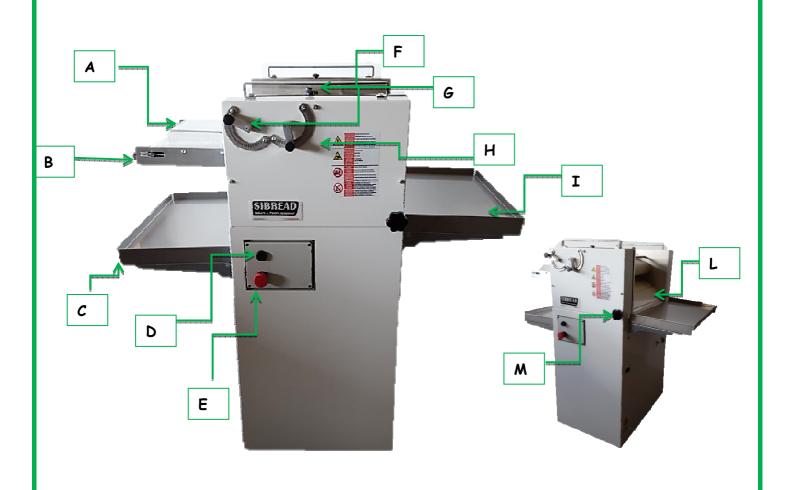

The connections must be executed in conformity with the regulations in force in the country.

DESCRIPTION OF THE MACHINE

The moulder works all type of dough bread. The safety device is formed by a belt of entry and by a protective plexiglass or grilled that raising stops the machine. The machine structure is welded steel and cylinders in chromed rolled steel and are equipped with non-stick Teflon scrapers. The transmission is mixed with V-belts and chain in order to avoid the possibility of slipping under load. With the handle adjusts the opening of the cylinders and carpets. The carpets are made of felt and PVC food nonstick. Low voltage controls

La macchina è composta dai seguenti elementi:

- A. Protection grille plexiglass or grilled
- B. Entrance carpet
- C. Tray for pieces back to the operator
- D. Start button
- E. Stop / emergency button
- F. Handle lamination adjustment
- G. Knob upper belt tensioner
- H. Handle rolling adjustment
- I. Tray collect pieces on the back
- L. Chute change in direction pieces
- M. Knob to change the chute direction

♣ FIRST STARTING AND TESTING

The following operations have to be performed by the persons authorized to the electric connections

1) check that the mains voltage corresponds to the voltage of the machine, then connect the plug to the electric supply mains.

2) CONTROL BUTTONS-safety grid

2 START PUSH- BUTTON
1 EMERGENCY STOP PUSH-BUTTON

- 3) Press the green push-button START 2. The machine works
- **4) Test emergency push-button.** Press the push-button **STOP 1.** The machine has to stop, If does not happen, contact the Manufacturing Firm.
- **5) Test grid security**: lifting the protective grid the machine must stop. After lowered, the grid of the machine is locked and you have to restart pressing the START button**2**

In every moment it is possible to stop the machine by pressing the Stop-emergency button 1 To start it again, it is necessary to press START 2

CORRECT USE

The machine has been manufactured for the moulding of typical products of bakery and pastry according to the modalities and the quantities established by the manufacturer in the technical data. Here there are the operational components:

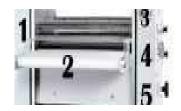

Set the machine in working position

Press the START button 2

At any time the machine stops pressing the STOP 1

Are present the following components: Belt entrance-safety grid – dough back Adjust the opening cylinders and upper belt through the levers
Put the dough on the belt **2. Opening the safety grid 1the machine stop**The locking of the machine is guaranteed by a microswitch
With the lever **5** you have the coming back of the dough

In every moment it is possible to stop the machine by pressing the Stop-emergency button 1

To start it again, it is necessary to press **START 2**

LEANING

Cleaning should be done only with the machine switched off
The dough inside the machine or sticked on the cylinders must not be removed
when the machine is switched on. Don't use jet of water or other products,
use a puff of air.

MAINTENANCE

During the maintenance operations the machine has not to be connected to the electric line. The replacement of parts, the mending of damages to the electric system etc. have to be executed by the specialised personal. If the machine is in warranty period, inform the Manufacturing firm

DEFECT AND SOLUTIONS

The machine does not start to working	Micro switch safety grid is in off	Check the micro switch
The machine does not start to working	The emergency button is connected	Turn it as indicated from the arrow of the emergency button
The machine does not start to working	the safety grid is not well lowered	Lower the safety grid
The belts don't turn	slacked belts	Stretch the belts

SCRAPING OF THE MACHINE

The structure of the machine is made of plate enamelled with powder enamel or with two-components epoxide enamel. The protections, the working plan, the pressing device, the bread pusher and the knives are made of stainless steel AISI 304. The belts are made of rubber. The electric parts are made of plastic material. For scraping, disassembled the machine into its parts of different material which have to be delivered, together with the hydraulic oil and the lubrification grease, to the competent elimination service.
